

CITY of NOVI CITY COUNCIL

Agenda Item F
November 24, 2014

SUBJECT: Approval of traffic control orders 14-25 through 14-48 for traffic control signage within Island Lake of Novi Phases 2A, 2B, 3A, 3B and 3C.

SUBMITTING DEPARTMENT: Department of Public Services, Engineering Division ¹² ^{BTC}

CITY MANAGER APPROVAL: 

BACKGROUND INFORMATION:

The City's sign replacement program was initiated in 2009 in response to new requirements from the Federal Highway Administration regarding retroreflectivity and new requirements in the Michigan Manual of Uniform Traffic Control Devices regarding sign sizes and font sizes to improve sign visibility for older drivers. Retroreflectivity is the ability of a surface to return light back to its source (i.e., signs and pavement markings reflecting light from headlights back to the driver's eyes). The changes were made to improve traffic safety and cause local agencies to replace older signs that are no longer effective or are difficult to see, which was the case in many parts of Novi at that time.

Island Lake is one of several developments with streets accepted prior to 2009 with decorative street signs and posts that do not have an agreement in place. In these cases, staff is contacting the Association and offering to either assist them in developing a plan for improving the signage along with execution of a maintenance agreement, or to replace the existing non-conforming signage with City standard signs and posts. We recently worked with the Association at Island Lake and they have decided to allow the City to take over and replace the signage for first phases of the development located north of the lake and east of Wixom Road (see attached letter from Island Lake of Novi Community Association). The replacements are funded as part of the sign replacement program in the budget.

There are no traffic control orders in place for the existing traffic control signs in these phases of Island Lake. Staff reviewed each intersection in the field to determine if the existing traffic control sign was appropriate. In six locations, the landscaping has grown and decreased the intersection sight distance requiring a more restrictive stop sign at the intersection instead of the existing yield sign. In two locations, the existing stop sign can be replaced by a less restrictive yield sign based on current sight distance. In one location, a yield sign was originally installed but is now missing.

Traffic control orders are required under the Uniform Traffic Code to enforce traffic control signs that have been installed on public streets. Therefore, staff has proposed the attached traffic control orders based on the recommendation of the consultant for approval by City Council. The replacement signs will be scheduled for installation upon approval.

TCO No.	Description
14-25	Northbound Acorn Trail to Stop at Delmont Drive*
14-26	Eastbound Braeburn Lane to Yield at Acorn Trail
14-27	Southbound Samoset Court to Yield at Braeburn Lane
14-28	Westbound Braeburn Lane to Stop at Wixom Road
14-29	Eastbound Albatross Drive to Stop at Peninsula Drive*
14-30	Westbound Albatross Drive to Stop at Wixom Road
14-31	Eastbound Ravine Drive to Stop at Wixom Road
14-32	Northbound Hillsdale Drive to Stop at Ravine Drive*

September 23, 2013

City of Novi
Att. Brian Coburn
Novi, MI 48374

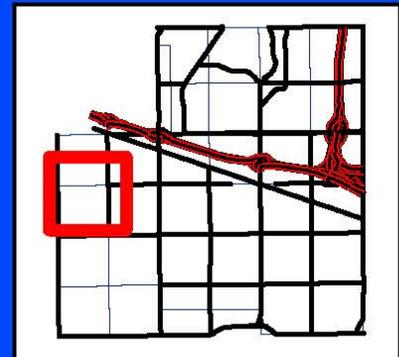

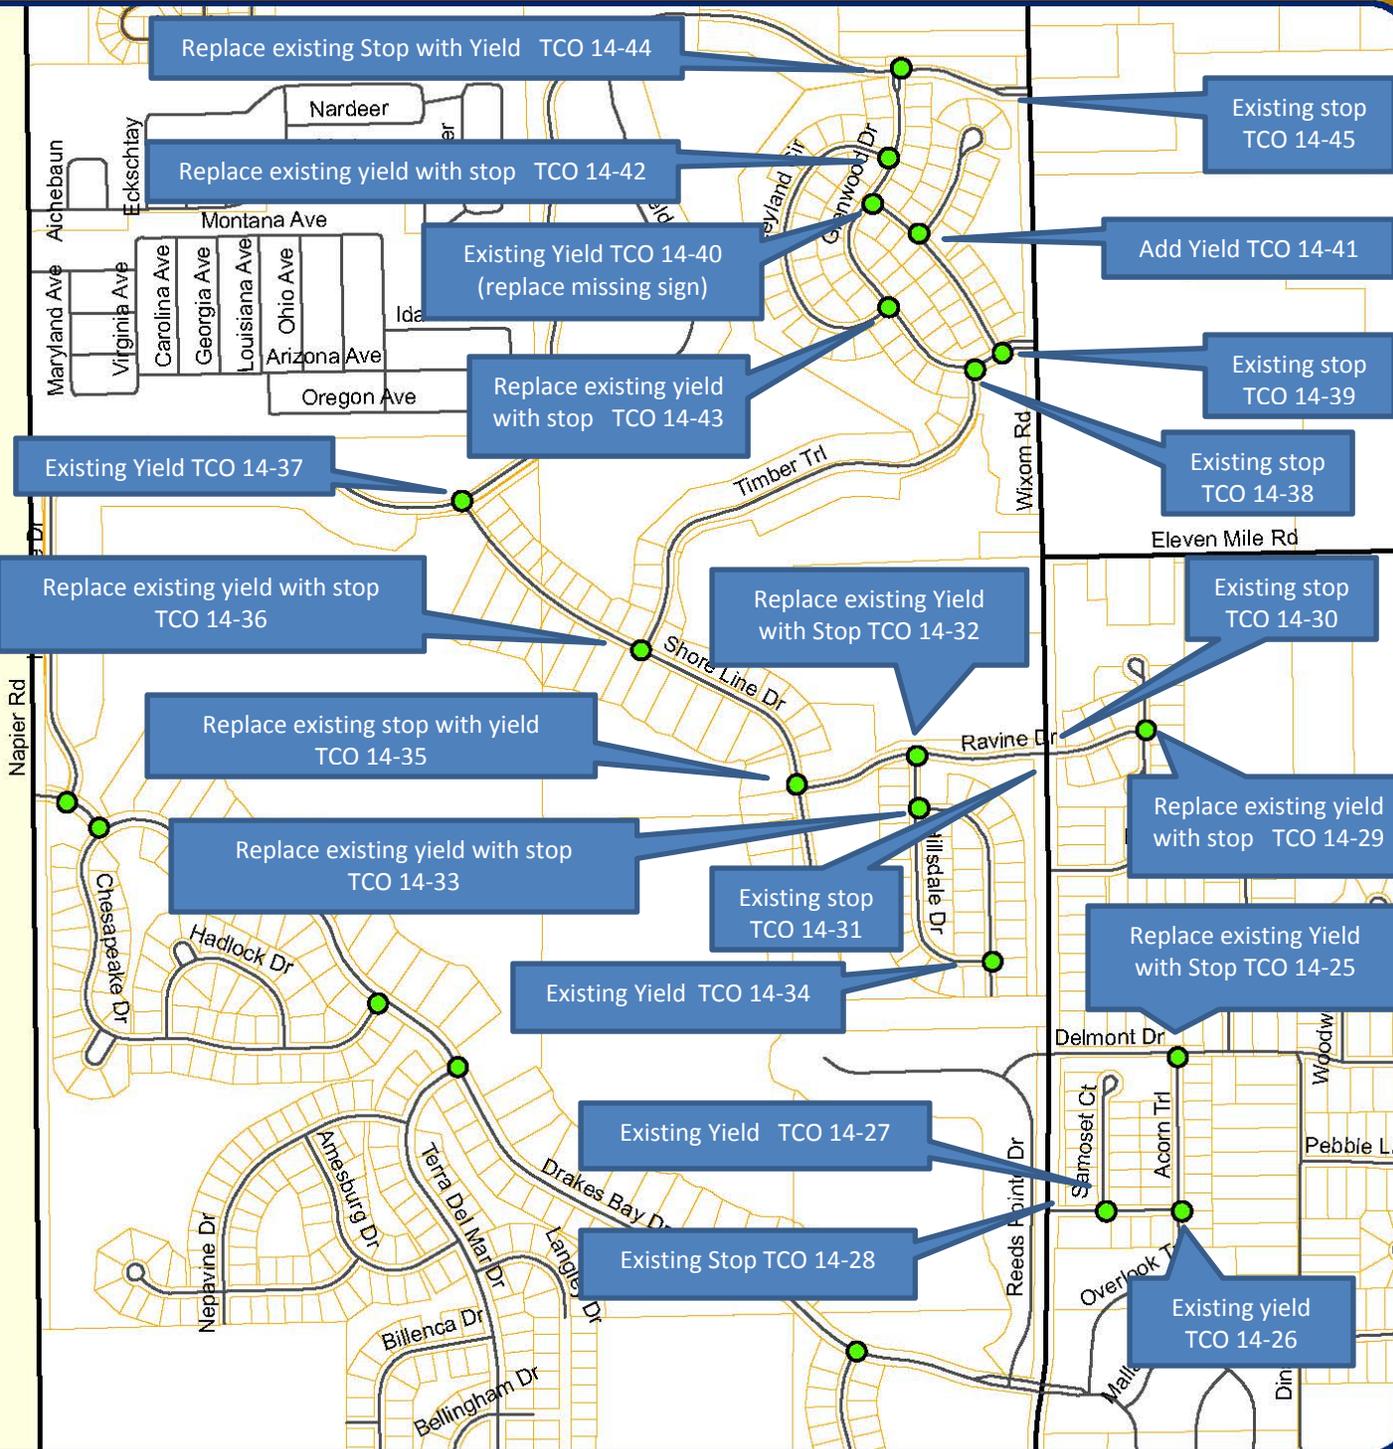

Dear Mr. Coburn,

On behalf of the Master Board of Directors for Island Lake of Novi Community Association, we hereby request the City of Novi take over the responsibility of all street signs on our public streets, in all phases of the development.

Sincerely,

Caroline Bundenthal
Property Manager

MEMORANDUM

TO: ROB HAYES, P.E.; DIRECTOR OF PUBLIC SERVICES
FROM: BRIAN COBURN, P.E.; ENGINEERING SENIOR MANAGER *BTC*
SUBJECT: ISLAND LAKE TRAFFIC CONTROL SIGNS
DATE: SEPTEMBER 24, 2014

The City's sign replacement program was initiated in 2009 in response to new requirements from the Federal Highway Administration regarding retroreflectivity and new requirements in the Michigan Manual of Uniform Traffic Control Devices regarding sign sizes and font sizes to improve sign visibility for older drivers. Retroreflectivity is the ability of a surface to return light back to its source (i.e., signs and pavement markings reflecting light from headlights back to the driver's eyes). The changes were made to improve traffic safety and cause local agencies to replace older signs that are no longer effective or are difficult to see, which was the case in many parts of Novi at that time.

Over the past five years, Engineering staff have been working with Field Operations staff to identify deficient traffic control signs and replace them with new signs that meet current Federal standards. We have also established a traffic sign inspection program to ensure that traffic control signs installed by the developer meet City standards prior to acceptance of the streets. This inspection also includes decorative sign posts that are allowed under Section 31-55 of the ordinance when accompanied by a maintenance agreement with the Association so the City is not responsible for the added costs of decorative sign posts.

There are several developments with streets accepted prior to 2009 with decorative street signs and posts that do not have an agreement in place. In these cases, staff is contacting the Association and offering to either assist them in developing a plan for improving the signage along with execution of a maintenance agreement, or to replace the existing non-conforming signage with City standard signs and posts. We recently worked with the Association at Island Lake and they have decided to allow the City to take over and replace the signage in Phases 2 through 5A. The replacements are funded as part of the sign replacement program in the budget.

Many of the signs in Island Lake were placed a decade ago and are showing their age. As a part of the replacement program, our standard practice is to evaluate each intersection within the subdivision to ensure that the appropriate traffic control is in place. In many cases, the traffic control signs were installed per the approved site plan at the time that the subdivision was constructed, but had not been reviewed since that time. Many of these signs were placed a decade ago and the vegetation has grown and decreased sight distance at some of the intersections. At each of these intersections where street pruning will not address the lack of sight distance, the existing yield sign is proposed to be replaced with a more appropriate stop sign based on the sight distance. Staff has communicated these potential changes with the Association.

Another aspect of the review is to ensure that a traffic control order is in place for each regulatory sign that is installed. Prior to 2009, many of the streets in subdivisions were accepted without traffic control orders in place. A traffic control is required under the Uniform Traffic Code (adopted by Ordinance) for enforcement of the traffic control sign. There are no traffic control orders in place for the older sections of Island Lake. A number of traffic control orders will be drafted by staff to reflect the updated signs and presented to City Council at a future meeting for consideration.

Please feel free to let me know if you have any questions about the sign replacement program or decorative sign supports.
